Detailed Action

- 1.) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2.) Claims 12-15, 17-24, and 26-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vaidya et al. (6,051,805) taken with the WIPO document no. WO02/058878 (cited by applicant). The patent to Vaidya et al. (6,051,805) discloses a method and system of managing an electric arc welding shop with features claimed, including: monitoring several torches as discussed at column 5, lines 12-15; monitoring average wire feed speed and electrical current as discussed at column 5, lines 15-35; determining productivity factors associated with duty factor or deposition rate as discussed at column 1, lines 39-55. The claims differ from Vaidya et al. (6,051,805) in calling for the use of a communication network to transmit monitored welding parameters to a central device. This difference does not patentably distinguish over the prior art. At the time applicant's invention was made, it would have been obvious to have used any well known technique to join the multiple monitors taught by Vaidya et al. (6,051,805). In particular, it would have been obvious to have used a communication network as claimed, the motivation being the teachings of the WIPO document no. WO02/058878 that such is advantageous for monitoring multiple welding stations from a central device (see the

Application/Control Number: 10/630,241 Page 3

Art Unit: 1725

abstract and figure 1 of the WIPO document no. WO02/058878, note the use of network 40 to effect the monitoring at 78 of weld stations 10).

- 3.) Applicant's arguments in the "Remarks" filed on 11/02/2005 have been carefully considered, but are not persuasive of patentability. Applicant argues that the Vaidya '805 patent uses a "performance arc time measurement apparatus" (PATM apparatus) while applicant's invention is based on a remote sensor, not a PATM. This argument is not convincing. It is not clear that the claims include any limitations that would distinguish a "remote sensor" from the sensing arrangement disclosed by Vaidya. The system in Vaidya transmits the same data as applicant's claimed system for subsequent analysis. The claims are considered to be unpatentable over the prior art for the reasons set forth above.
- 4.) All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Application/Control Number: 10/630,241

Art Unit: 1725

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication should be directed to Clifford C Shaw at telephone number 571-272-1182. The examiner can normally be reached on Monday through Friday of the first week of the pay period and on Tuesday through Friday of the second week of the pay period.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Thomas G. Dunn, can be reached at 571-272-1171. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications
